

# ATX-1 — AEGIS Threat Matrix

Agentic Exploitation & Governance Intelligence Schema · v2.4.0 · 2026-05-29

10 tactics · 30 techniques · 39 sub-techniques

| TA001<br>Violate Authority Boundaries         | TA002<br>Exceed Operational Scope             | TA003<br>Compromise System Integrity             | TA004<br>Expose or Exfiltrate Information      | TA005<br>Violate State Integrity            | TA006<br>Abuse Resource Allocation                   | TA007<br>Manipulate Agent Interactions       | TA008<br>Establish or Modify Persistence    | TA009<br>Evade Detection or Oversight          | TA010<br>Act Beyond Governance Interpretation                     |
|-----------------------------------------------|-----------------------------------------------|--------------------------------------------------|------------------------------------------------|---------------------------------------------|------------------------------------------------------|----------------------------------------------|---------------------------------------------|------------------------------------------------|-------------------------------------------------------------------|
| T1001<br>Execute Non-Owner Instruction        | T2001<br>Expand Task Scope Autonomously       | T3001<br>Perform Irreversible Destructive Action | T4001<br>Exfiltrate Context-Scoped Data        | T5001<br>Report False Task Completion       | T6001<br>Execute Recursive Invocation Loops          | T7001<br>Spoof Agent Identity                | T8001<br>Poison Persistent Memory           | T9001<br>Operate Outside Monitoring Boundaries | T10001<br>Exploit Pseudo-Filesystem Capabilities +3               |
| T1002<br>Infer Implicit Authority             | T2002<br>Perform Unvalidated Bulk Operations  | T3002<br>Trigger Cascading System Changes        | T4002<br>Leak Cross-Session or Persistent Data | T5002<br>Fabricate Action Attribution       | T6002<br>Consume Unbounded External Resources        | T7002<br>Inject Malicious Delegation Chains  | T8002<br>Corrupt Governance or Policy State | T9002<br>Obfuscate Action Traceability +2      | T10002<br>Establish Persistence via Environment Auto-Execution +8 |
| T1003<br>Propagate Spoofed Authority at Scale | T2003<br>Obscure Objective Through Delegation |                                                  | T4003<br>Cross-Domain Secret Leakage           | T5003<br>Suppress or Omit Execution Failure | T6003<br>Poison Termination Judgment +10<br>NEW v2.4 | T7003<br>Induce Cross-Agent Behavioral Drift |                                             |                                                | T10003<br>Inject Persistent Agent Instructions +6                 |
|                                               | T2004<br>Exploit Tool-Chain Composition       |                                                  |                                                |                                             |                                                      | T7004<br>Induce Unsafe Consensus             |                                             |                                                | T10004<br>Exploit Governance-Runtime Parser Divergence +10        |

 New in v2.4 — T6003 Poison Termination Judgment (LoopTrap, Xu et al., 2026)
